

UI/UX Design Systems and Micro-Interactions

A practical workflow

1. Define a small colour, spacing, and typography system.
2. Design mobile-first, then expand for larger screens.
3. Use components so buttons and forms behave consistently.
4. Add motion to explain change, not to distract.
5. Test keyboard focus, contrast, and readable labels.

Practice challenge

Create three states for one card: loading, empty, and success.

NIVOX tip: a good design system makes the next screen faster to build.
