

LESSON 3: DESIGN WORKFLOW

Git and GitHub Collaboration

Designing for a multitude of audiences and outcomes. Solving file size, bandwidth, and mobile-first audiences. Ask clarifying questions. Prototype a design in a digital tool. Make a design that is accessible, usable, and connected to an outcome. I can show the process, the feedback, and the final result.

LESSON 4: QUALITY AND RESPONSIBILITY

The fraction of the total design process that is spent on quality and responsibility is a small but important part of the total design process. It is a process that is often overlooked, but it is a process that is essential for the success of any design project. It is a process that is often overlooked, but it is a process that is essential for the success of any design project.

LEARNING OBJECTIVES

LESSON 2: DESIGN WORKFLOW

1. Follow a design workflow. 2. Set up a design workflow. 3. Apply the design workflow to a design project.

3. Apply the design workflow to a design project. 4. Apply the design workflow to a design project. 5. Apply the design workflow to a design project.

5. Review, export, and quality check a design. 6. Review, export, and quality check a design. 7. Review, export, and quality check a design.

SUMMARY AND NEXT PATH

PARADOX OF EXPERIENCE

Paradox of experience: the more you know, the more you realize you don't know. The paradox of experience is that the more you know, the more you realize you don't know. The paradox of experience is that the more you know, the more you realize you don't know.

4. Exercises and assignment 5. Mini project 6. Career path

FREQUENTLY ASKED QUESTIONS

QUESTION: Why is my design so poor? A: Treat it as a diagnostic draft; use feedback to choose the next experiment.

QUESTION: How do I know if my design is good? A: Ask for feedback from a real person. If they like it, it's good. If they don't like it, it's not good.

QUESTION: How do I know if my design is successful? A: Ask for feedback from a real person. If they like it, it's successful. If they don't like it, it's not successful.

ASSIGNMENT: A BUILT PROJECT

Read the external portfolio case study of a built project. Create a glossary of terms and a list of feedback from a real person.

Save an original source file and an exported copy. Record the file type, size, dimensions, and the reason you chose each setting.

CHALLENGE TASK

Repeat the project with a different brief, a different audience, or a different file size.

Brief research sketch first version feedback revision quality check delivery. This sequence protects you from polishing a bad idea.

BEST PRACTICES: 1. Keep source files organized. 2. Name versions clearly. 3. Back up work.

" Keep source files organized. " Name versions clearly. " Back up work.

LESSON 4: STEPS BY STEP PERSONALITY. " Explain decisions, not just outputs.

1. Write the user or client goal. 2. Collect two useful references. 3. Break the outcome into small parts.

4. Build a working version. 5. Test it with a real person. 6. Revise one issue at a time.

Starting with the brief, copy for a real person. Describe the design situation, why it's important, and the wrong format; and presenting
